The global Agricultural Hose Reels market size is predicted to grow from US\$ 162 million in 2025 to US\$ 236 million in 2031; it is expected to grow at a CAGR of 6.4% from 2025 to 2031.

The agricultural hose reel is a widely used device in agricultural production. It is mainly used to store and manage agricultural hoses so that irrigation, fertilization and other operations can be carried out more efficiently. It is usually made of solid metal materials (such as steel) or high-strength plastics, with sufficient strength and durability to withstand the weight and tension of the hose. The shape of the reel body is generally circular or polygonal, with a rotating shaft in the center so that the hose can be smoothly wound on it. Through the management of the reel, the use of the hose is more orderly, the entanglement and tangling of the hose is avoided, and the efficiency of irrigation operations is improved. When the hose is needed, just release the hose from the reel and it can be quickly connected to the irrigation equipment, which is convenient and quick.

The agricultural hose reel market is growing as a whole. This is mainly due to the advancement of agricultural modernization and the increasing demand for efficient irrigation and water resource management. As a major agricultural country, China's agricultural hose reel market is also expanding. With the adjustment of the agricultural industrial structure and the continuous advancement of agricultural technology, more and more farmers and agricultural enterprises have begun to adopt agricultural hose reels to improve irrigation efficiency and agricultural production benefits. Manual reels are more traditional products on the market, with low cost, simple operation, no need for

additional energy supply, and are suitable for small farmlands and family farms. Its market share is still large, especially in some economically underdeveloped areas and cost-sensitive user groups. Electric reels have the advantages of easy operation and labor saving, which can greatly improve work efficiency. With the continuous advancement of battery technology and the reduction of costs, the market demand for electric reels has gradually increased. Especially in the irrigation operations of medium and large farmlands, electric reels are more and more widely used. Generally speaking, small hose reels are suitable for small-scale farmland irrigation and courtyard irrigation, while medium and large hose reels are suitable for large farmlands, orchards, vegetable bases and other places. The global agricultural hose reel market is highly competitive, with major manufacturers including companies from developed countries such as Europe and the United States. These companies have advanced technology and rich experience, with high product quality and performance, and occupy a large market share in the international market.
