The global Agricultural IoT Software market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Agricultural IoT software is a software system applied in the field of agriculture, which collects and integrates a large amount of agricultural production data by connecting various sensors, devices and networks, and uses data analysis, artificial intelligence and other technologies to provide data analysis, decision support, management and monitoring services required by farmers and agricultural professionals to improve agricultural production efficiency, quality and sustainability. Agricultural IoT software can be widely used in various fields of agricultural production, such as planting, breeding, water conservancy, etc., to help farmers better understand the agricultural production environment and trends, make more informed decisions, improve agricultural production efficiency and quality, and promote sustainable agricultural development.

According to our research, the number of global connected IoT devices was about 14 billion, grew by 18% compared to 2021. The data released by the Office of the Central Cyberspace Affairs Commission shows that, by the end of 2022, China has built and opened a total of 2.3 million 5G base stations. 110 cities across the country have reached the gigabit city construction standards. Gigabit optical network has the ability to cover more than 500 million households. IPv6 scale deployment application is deeply promoted. The number of active users exceeds 700 million, mobile network IPv6 traffic accounted for nearly 50%. The total size of China"s data center racks exceeds 6.5 million standard racks, with an average annual growth rate of more than 30% in the past five years.
