The global Agricultural Microbiome Analysis Service market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Agricultural microbiome analysis service refers to the process of studying and analyzing the microorganisms present in agricultural systems such as soil, plants, and animals. This service involves the use of advanced molecular techniques to identify and characterize the microbial communities and their functions in agricultural ecosystems.

The analysis of agricultural microbiomes can provide valuable insights into the interactions between microorganisms and their host organisms, as well as their impact on plant growth, soil health, nutrient cycling, and disease resistance. By understanding the composition and dynamics of microbial communities, farmers and researchers can make informed decisions about crop management practices, such as the use of fertilizers, pesticides, and other agricultural inputs.

Agricultural microbiome analysis services typically include sample collection, DNA or RNA extraction, sequencing of microbial DNA or RNA, bioinformatics analysis, and interpretation of the results. The analysis may involve the identification of specific microorganisms, the assessment of microbial diversity and abundance, and the prediction of functional capabilities of the microbial communities.

United States market for Agricultural Microbiome Analysis Service is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
