The research report highlights the growth potential of the global Agricultural Pheromones market. Agricultural Pheromones are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Agricultural Pheromones. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Agricultural Pheromones market.

Pheromones are chemicals produced as messengers that affect the behaviour of other individuals of insects or other animals. They are usually wind borne but may be placed on soil, vegetation or various items. It has been found that pheromones may convey different signals when presented in combinations or concentrations. Pheromones differ from sight or sound signals in a number of ways. They travel slowly, do not fade quickly, and are effective over a long range. Sound and sight receptors are not needed for pheromone detection, and pheromone direction is not limited to straight lines.

The main manufacturers of global Agricultural Pheromones include Shin-Etsu, Suterra, BASF, Biobest, etc. These top four manufacturers hold a market share about 35%. Europe is the leading production region in the world, accounting for about 40% of the

market share; followed by North America and Japan.
