Abstracts

The global Agricultural Products E-commerce Trading Platform market size is predicted to grow from US\$ 232941 million in 2025 to US\$ 414094 million in 2032; it is expected to grow at a CAGR of 8.6% from 2026 to 2032.

Agricultural Products E-commerce Trading Platform refers to a specialized digital operation carrier built on internet and information technology, which integrates functions such as commodity display, order matching, electronic payment, logistics docking, quality traceability, and after-sales service to connect multi-tier participants in the agricultural product industry chain including farmers, agricultural cooperatives, processing enterprises, distributors, retailers, and end consumers. It supports diverse transaction modes such as B2B (business-to-business bulk wholesale), B2C (direct sales from merchants to consumers), live-streaming e-commerce, and community group-buying, breaks through geographical restrictions and the limitations of traditional offline circulation channels, shortens the distance between production and consumption ends, reduces intermediate transaction costs, and provides standardized, transparent, and efficient trading scenarios for both primary agricultural products (such as fresh fruits, vegetables, grains, and livestock products) and processed agricultural products (such as dried fruits, pickled vegetables, and prepared agricultural snacks).

The Agricultural Products E-commerce Trading Platform industry is witnessing core trends including deep integration of technologies such as AI-driven demand forecasting, blockchain traceability, and 5G/VR immersive shopping, accelerated innovation of 'live-streaming + community group-buying + cross-border' hybrid models, and clustered development in eastern coastal regions alongside accelerated catch-up in central and western areas driven by county-level e-commerce parks; key opportunities lie in strong

policy dividends from national strategies like 'Digital Commerce for Rural Prosperity' and rural revitalization, surging demand for high-quality, branded, and geographically indicated agricultural products amid consumption upgrading, huge growth potential in sinking markets with rural internet penetration exceeding 65%, expanded cross-border channels under frameworks like RCEP, and improved efficiency from the maturation of cold chain logistics networks; however, the industry still faces prominent challenges: low product standardization leading to quality inconsistencies and high after-sales dispute rates, high cold chain logistics costs and inadequate 'last mile' delivery in rural areas, insufficient digital literacy among farmers and shortage of professional e-commerce talents, fierce homogeneous competition compressing profit margins, and difficulties in quality supervision due to fragmented supply chains and information asymmetry.
