Agricultural rockwool is a man-made inorganic fibrous material. It is primarily composed of natural rocks such as basalt. These rocks are melted at high temperatures, usually around 1400 - 1600°C. After melting, the liquid rock is fiberized through processes like centrifugation or blowing to form long, thin fibers. In addition to the rock - derived fibers, a small amount of binder is added. The binder is usually an organic resin, carefully selected to be non - toxic to crops and serves to hold the fibers together, maintaining the shape and structural stability of the rockwool.
