Agricultural stone picker is a kind of agricultural machinery equipment specially used to remove stones, gravel and other debris from farmland. Its main function is to improve soil quality, protect the safety of agricultural machinery and equipment (such as seeders, plows, harvesters) during operation, and prevent stones from causing mechanical damage or crop damage. This equipment is usually towed by a tractor, and uses a hydraulic drive system to drive rotating gears or chains to separate stones from the soil and collect them in a hopper. According to different structures, stone pickers can be divided into passive screening type, active conveying type and vibration screening type. They are suitable for various terrains such as plains, hills and plateaus, and are widely used in agricultural operations such as farmland preparation, land reclamation and farmland improvement.
