A tractor is a farm vehicle that provides the power and traction to mechanize agricultural tasks, especially tillage. However, the use of tractors has been shifted to various farm related tasks. Agricultural implements are towed behind a tractor that then provides a source of power for the mechanization of implements. Agricultural use of tractors is the largest segment in the agricultural machinery sector. Improvement in efficiency is one of the reasons why tractors are popularly employed by farmers.

Driven by growing global population, rising demand for food and the need for better yield and productivity, future of tractor machinery market is seen to be positive. Opportunities lie in higher market penetration in the developing regions of Asia and South America. Technological innovation in order to shorten the replacement cycle will

further boost the market growth for tractors. Low purchasing power of farmers and the high cost of products are some of the major constraints for market growth, specifically in cost-sensitive regions.
