The global Agricultural Wrap Film for Silage market size is predicted to grow from US\$ 679 million in 2025 to US\$ 989 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

In 2025, global Agricultural Wrap Film for Silage production reached approximately 283 K Tons, with an average global market price of around 2452 USD per Ton.

Agricultural Wrap Film for Silage refers to a specialized agricultural polyethylene stretch film used for wrapping silage bales, including grass, alfalfa, haylage, straw and corn stalks. It is designed to provide strong stretchability, cling performance, puncture resistance, UV resistance and airtight sealing, helping create anaerobic fermentation conditions and preserve forage quality during storage.

Agricultural Wrap Film for Silage leverages the unique product characteristics of high barrier sealing, interlayer self-adhesion, puncture resistance, UV resistance, and wide temperature and weather resistance resulting from multi-layer co-extrusion. It effectively addresses the industry pain points of traditional open-air storage and earthen cellar silage, which are susceptible to rainwater, bacteria, and oxygen contamination, leading to mold and spoilage of forage and significant nutrient loss. It also addresses the industry pain points of concentrated forage production but inability to store forage across seasons, resulting in an imbalance in feed supply for livestock throughout the year. Agricultural Wrap Film for Silage helps farms stabilize the quality of silage fermentation and reduce livestock losses caused by forage waste. It is also compatible with mechanized baling and wrapping operations to achieve standardized silage production. As livestock farming scales up and farmers become more aware of cost reduction and efficiency improvement, it forms the core driver of the industry. Coupled

with the continuous expansion of the planting range of high-quality forages such as alfalfa and whole-plant corn, and the steady increase in the popularity of commercially wrapped silage, the entire industry chain is steadily expanding from top to bottom.

The upstream raw materials for Agricultural Wrap Film for Silage mainly include linear low-density polyethylene (LLDPE) and mLLDPE. Typical raw material suppliers include Dow Inc., SABIC, LG Chem, and China National Petroleum Corporation. The downstream application is mainly in the silage of forage. Typical downstream customers include Dairy Farmers of America, Fonterra Co-operative Group, Arla Foods, FrieslandCampina, Mengniu, and Yili.

The single-line production capacity of Agricultural Wrap Film for Silage is greatly affected by factors such as film width, thickness, number of layers, line speed, roll changing efficiency, order specification switching, and operating rate, typically ranging from several thousand to tens of thousands of tons. The industry's gross profit margin is usually in the range of 20%-30%.

United States market for Agricultural Wrap Film for Silage is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
