## Abstracts

The global Agriculture Controlled Release Fertilizers Granule market size is predicted to grow from US\$ 225 million in 2025 to US\$ 368 million in 2032; it is expected to grow at a CAGR of 7.4% from 2026 to 2032.

Controlled-release fertilizers (CRFs) are granular fertilizer particles that are coated with a polymer or resin that restricts the amount of moisture contact and functions to dissolve the fertilizer particles to gradually release fertilizer over time

Nutrient loss from agricultural land is a major concern for farmers worldwide due to the growing popularity of controlled release granular fertilizers. The controlled release fertilizer granules market is growing owing to increasing population and demand for food. To avoid loss of agricultural land, the demand for environmentally friendly, affordable and sustainable fertilizers is growing. These factors are expected to drive the controlled release fertilizer granules market. The government offers subsidies and schemes to facilitate the regular use of the controlled release fertilizer granules market. The production technology of controlled-release fertilizer granules is expensive, and the price of the final product automatically increases. This factor is expected to hamper the market growth.
