According to our LPI (LP Information) latest study, the global Agro Textiles market size was valued at US$ 7686.9 million in 2023. With growing demand in downstream market, the Agro Textiles is forecast to a readjusted size of US$ 9192.4 million by 2030 with a CAGR of 2.6% during review period.

The research report highlights the growth potential of the global Agro Textiles market. Agro Textiles are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Agro Textiles. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Agro Textiles market.

The word 'Agro textiles' now is used to classify the woven, nonwoven and knitted fabrics applied for agricultural and horticultural uses covering livestock protection, shading, weed and insect control, and extension of the growing season. The essential properties required are Strength, elongation, stiffness, porosity, bio-degradation, resistance to sunlight and resistance to toxic environment.

Europe is a mature market and hence the demand is anticipated to be sluggish over the forecast period. Large agricultural textiles demand in Europe is attributed to favourable government regulations regarding reusability of polymers and bio based products. Thus, Europe is anticipated to witness stagnant growth in the agriculture textiles market over the forecast period.
