The global AGRP Polyclonal Antibody market size is predicted to grow from US\$ 5.66 million in 2025 to US\$ 6.98 million in 2032; it is expected to grow at a CAGR of 3.1% from 2026 to 2032.

AGRP polyclonal antibody (Agrp polyclonal antibody) is a specific antibody against AGRP (Agouti-related protein, also known as Agrt or Art) protein. It is a type of polyclonal antibody, that is, a mixture of antibodies produced by multiple different immune cell clones. These cloned antibodies can recognize and bind to multiple different antigenic epitopes on the AGRP protein, thereby providing comprehensive immune recognition capabilities. AGRP polyclonal antibodies are usually obtained by injecting AGRP or its related antigens into animals (such as guinea pigs) to stimulate the immune system to produce an immune response, and then separated from the animal serum.

AGRP polyclonal antibodies have a wide range of application needs in biomedical research, drug development, and clinical diagnosis. In particular, in the study of metabolic diseases such as obesity and diabetes, AGRP is a key regulatory factor, and its polyclonal antibodies have become an important tool for studying the pathogenesis and treatment of these diseases. AGRP polyclonal antibodies usually have high specificity and sensitivity, can accurately identify and bind to AGRP proteins, and provide researchers with reliable experimental tools. In summary, the AGRP polyclonal antibody market has broad development prospects in the current biomedical research and drug development fields.
