According to our LPI (LP Information) latest study, the global AGV and AMR (Mobile Robots) market size was valued at US\$ 3277.1 million in 2023. With growing demand in downstream market, the AGV and AMR (Mobile Robots) is forecast to a readjusted size of US\$ 24370 million by 2030 with a CAGR of 33.2% during review period.

The research report highlights the growth potential of the global AGV and AMR (Mobile Robots) market. AGV and AMR (Mobile Robots) are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of AGV and AMR (Mobile Robots). Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the AGV and AMR (Mobile Robots) market.

AGV (Automated Guided Vehicle) and AMR (Autonomous Mobile Robot) refer to types of mobile robots used in industrial settings for material handling and logistics. AGVs are guided by predefined paths or markers on the floor, following a fixed route for transportation tasks. They often require physical modifications to the environment for guidance. In contrast, AMRs utilize advanced sensors, cameras, and mapping technologies to navigate autonomously without the need for predefined paths. AMRs can adapt to dynamic environments, avoiding obstacles and optimizing routes on the fly. Both AGVs and AMRs play crucial roles in improving efficiency and automation in warehouses, manufacturing facilities, and distribution centers, contributing to the advancement of autonomous logistics and smart factories.

The realm of Autonomous Mobile Robots (AMR) and Automated Guided Vehicles (AGV) is expanding beyond logistics and manufacturing, driven by advancements in Artificial Intelligence (AI), Machine Vision, manipulation capabilities for automated picking and placing, and robotic mechanics.

According to the study, the AGV and AMR market is projected to reach approximately \$20 billion by 2028, experiencing growth rates of approximately 22% for AGVs and 37% for AMRs. The combined installed base of AGVs and AMRs is set to surpass 2.7 million by 2028, making mobile robots a commonplace presence in daily operational activities.

The study highlights pivotal factors and challenges, including the central role of automation in the manufacturing and logistics sectors as part of Industry 4.0 and Supply Chain 4.0 initiatives. The growth of e-commerce serves as a key driver for AGV/AMR demand in warehouse automation. Global e-commerce sales have experienced a CAGR of 20% over the past decade, surpassing \$5 trillion worldwide in 2022, with expectations to reach around \$8 trillion by 2028. The share of online retail sales has burgeoned from 2% of the total to roughly 15%, with projections indicating it could exceed 22% by 2028.

High personnel costs in developed countries have fueled interest in AGVs and AMRs. The annual costs for a forklift operator can escalate to \$50,000, and constant operation requires multiple drivers. Coupled with forklift investment, annual costs can exceed \$200,000. The rise of Artificial Intelligence and Deep Learning is causing disruption across industries, including warehousing.
