The AGV Tugger is an unmanned material handling device based on automated navigation technology, representing a specialized application type within Automated Guided Vehicles (AGVs). Its core function involves autonomous path planning and dynamic obstacle avoidance through contactless navigation systems (e.g., LiDAR, vision recognition, or electromagnetic induction), combined with a towing mechanical interface and load adaptation mechanisms to transport material pallets, carriers, or mobile racks. The device employs a distributed control system and wireless communication protocols to support multi-vehicle collaborative operations and dynamic task allocation, featuring capabilities such as battery monitoring, path optimization, and fault self-diagnosis. It adapts to dynamic logistics requirements in flexible production environments, with applications spanning industrial manufacturing, warehouse distribution, and airport baggage handling. By replacing traditional manual towing operations, it significantly enhances material flow efficiency and operational safety.

Typical products include: Multiway Robotics' MW-SP60, Stande Robotics' GULF-3000-QDD, etc.
