AI for Legal refers to the application of artificial intelligence technologies?such as machine learning, natural language processing, knowledge graphs, and generative AI?within legal services and legal workflows. These systems are designed to automate or augment tasks including legal research, contract review, document drafting, case law retrieval, compliance analysis, and litigation support. By processing large volumes of legal texts and unstructured data, AI systems enhance efficiency and accuracy in legal work through semantic understanding and reasoning, enabling partial automation of knowledge-intensive tasks across law firms, corporate legal departments, and judicial institutions.

AI for Legal is currently in the early commercialization phase, transitioning from assistive tools to core productivity enablers within the legal industry. Initial adoption has been concentrated in high-volume, text-intensive tasks such as contract review, legal research, and document drafting, particularly within corporate legal departments and large law firms. With the advancement of generative AI, these systems are evolving from information retrieval tools to content generation and preliminary legal analysis platforms, significantly improving efficiency.

From an industry perspective, the market is driven by legal technology (LegalTech) companies, large enterprise software vendors, and AI platform providers. In the short term, AI is primarily deployed as an augmentation tool within existing legal workflows. In the long term, it is expected to evolve into semi-automated legal systems capable of

handling a portion of routine legal work. However, the sector faces significant constraints, including high accuracy requirements, liability and accountability concerns, data privacy issues, and strict regulatory frameworks. As a result, adoption is progressing cautiously despite strong potential.
