Abstracts

The global AI Agents for Business market size is predicted to grow from US\$ 7826 million in 2025 to US\$ 59658 million in 2032; it is expected to grow at a CAGR of 31.1% from 2026 to 2032.

AI Agents for Business refer to autonomous or semi-autonomous software systems built on large language models and tool-use capabilities that can understand business objectives, decompose tasks, and execute workflows by interacting with enterprise applications, databases, and APIs. Unlike traditional automation systems that follow fixed rules, AI agents incorporate reasoning and adaptive decision-making, enabling them to perform complex cross-system tasks such as customer relationship management, sales operations, financial analysis, IT support, and knowledge management, thereby augmenting or replacing human cognitive labor in business processes.

AI Agents for Business are currently in the early commercialization phase, transitioning from assistive tools toward execution-oriented systems capable of performing end-to-end business workflows. The primary demand drivers include enterprise pressure to reduce operational costs and improve productivity, particularly in repetitive knowledge-intensive domains such as sales, customer service, operations, and back-office functions.

From an industry perspective, the market is shaped by a multi-layer ecosystem consisting of foundation model providers, cloud infrastructure companies, enterprise SaaS vendors, and emerging AI-native startups. In the near term, AI agents are primarily deployed as embedded copilots within existing enterprise software systems. In the long term, they are expected to evolve into autonomous digital workers capable of

independently executing business processes. However, the sector still faces significant challenges related to reliability, data security, permission management, and accountability in automated decision-making.
