The global AI Computing Tokens market size is predicted to grow from US\$ 14099 million in 2025 to US\$ 190355 million in 2032; it is expected to grow at a CAGR of 35.5% from 2026 to 2032.

AI computing tokens refer to the basic units used to measure and bill the computational workload generated when artificial intelligence models process data. In large language models (LLMs) and other AI systems, input text, images, audio, or code are broken down into smaller segments called tokens. Each token represents a piece of information?such as a word, part of a word, or character?that the model analyzes during training or inference. AI service providers typically charge users based on the number of tokens processed when using AI APIs or cloud AI platforms. Therefore, AI computing tokens function as a standardized unit for measuring AI model usage, computing consumption, and service pricing.
