The global AI Designed Antibodies market size is predicted to grow from US\$ 401 million in 2025 to US\$ 1974 million in 2032; it is expected to grow at a CAGR of 25.7% from 2026 to 2032.

AI-designed antibodies refer to antibody discovery and engineering workflows that use machine learning/deep learning models to computationally generate, screen, and optimize antibody sequences and structures. By integrating antigen structure/epitope cues, antibody repertoire data, and experimental measurements (affinity, specificity, stability, immunogenicity, and developability), AI enables a closed loop of candidate generation, in silico ranking, multi-objective optimization, and wet-lab validation—accelerating the creation of improved antibody molecules and supporting tasks such as de novo design, affinity maturation, humanization, and developability risk reduction.
