The global AI Drug Discovery market size is predicted to grow from US\$ 6779 million in 2025 to US\$ 49380 million in 2032; it is expected to grow at a CAGR of 31.0% from 2026 to 2032.

AI Drug Discovery refers to the use of artificial intelligence (AI) technologies, machine learning (ML) algorithms, and big data analysis to accelerate drug discovery, design, screening, and optimization. The core advantage of AI drug discovery lies in its high data processing and pattern recognition capabilities, which can help identify potential drug candidates, predict biological activities, optimize preclinical drug effects, and shorten the drug development cycle. Common applications in AI drug discovery include target discovery, virtual screening, drug repurposing, molecular design, and clinical data analysis.

The upstream of the industry chain involves data resources and algorithm technologies, such as genomic data, protein structure databases, chemical libraries, and AI platforms. Downstream applications are concentrated in pharmaceutical companies, new drug R&D institutions, and contract research organizations (CROs), supporting drug discovery, target validation, drug repositioning, and personalized medicine design. Pharmaceutical companies leverage AI to shorten development cycles, reduce costs, and improve drug success rates. CROs utilize AI for compound screening, toxicity prediction, and clinical trial design, enhancing overall R&D efficiency.

Development trends include multimodal data integration, generative AI for drug design, AI-assisted clinical trial optimization, and precision medicine integration. Driving factors include high costs of traditional drug development, long R&D timelines, high clinical failure rates, and enhanced AI computational capabilities. Constraints include difficulty

in acquiring high-quality data, limited algorithm interpretability, regulatory uncertainties, and shortage of specialized talent. Overall industry gross margins are relatively high, typically ranging from 40% to 60%, driven by the added value of software and AI services to pharmaceutical companies and technological barriers.
