The global AI Emotional Companionship market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The AI ??emotional companionship industry is an emerging field of technology application, focusing on using artificial intelligence technology to provide users with emotional support and social interaction, mainly reflected in personalized conversations and companionship through virtual characters. This type of application allows users to communicate with AI characters customized or preset according to personal preferences, such as celebrities, animation, and game characters, and create an immersive experience through multimodal interactions such as text and sound. Technically, AI emotional companionship applications rely on advanced technologies such as large language models (LLMs) and multimodal AIGC, enabling AI to not only respond to user needs, but also show emotional coherence and personalized feedback in communication. The iteration of these technologies and the development of computing infrastructure lay the foundation for the prosperity of applications. In the future, the industry is expected to continue to deepen the satisfaction of personal emotional needs, while exploring a wider range of application scenarios, such as mental health support and personalized education, but the accompanying privacy security and ethical challenges cannot be ignored. To ensure healthy and sustainable development, detailed ethical guidelines and technical supervision will become key.
