AI Fiber Bromine refers to high-purity bromine or bromine-based materials used in the production of high-end optical fibers, fiber preforms, and high-speed optical communication fibers for AI data centers. These materials are mainly used to optimize refractive index control, reduce transmission loss, and improve the stability and purity of optical fibers, making them one of the key raw materials in premium fiber manufacturing. As demand for AI servers, data center interconnects, 800G/1.6T optical modules, and high-speed optical communications continues to grow, the need for high-performance optical fibers is increasing, which in turn is driving demand for high-purity bromine materials. In 2025, global AI Fiber Bromine production reached approximately 65041 tons, with an average global market price of around 4000 USD/ton. The production capacity for AI Fiber Bromine in 2025 was approximately 70000 tons . The typical gross profit margin for AI Fiber Bromine between 20% and 40%.
