AI Grading Tools help educators grade students' work faster and more consistently. These tools use artificial intelligence (AI), machine learning (ML), and natural language processing (NLP) to assist or automate the grading process. They allow teachers and professors to evaluate assignments, quizzes, essays, exams, or programming tasks without manually scoring every submission. AI grading software provides feedback on student assignments, highlights common mistakes, and generates reports on student performance and trends. AI grading tools evaluate student assignments by applying rubric-based scoring, clustering similar responses, and analyzing both structured answers (like multiple-choice) and unstructured answers (like essays or code). AI grading tools also include optical character recognition (OCR) to accurately extract and interpret handwritten or scanned student responses, thereby improving grading reliability and expanding support for non-digital submissions.
