The global AI in Architecture market size is predicted to grow from US\$ 978 million in 2025 to US\$ 9943 million in 2032; it is expected to grow at a CAGR of 31.1% from 2026 to 2032.

AI in Architecture refers to the application of artificial intelligence technologies such as machine learning, generative models, computer vision, and optimization algorithms across the architectural lifecycle, including design, planning, construction, and facility management. By leveraging data-driven modeling of spatial requirements, structural constraints, environmental conditions, and user behavior, AI enables automated design generation, performance prediction, construction optimization, and lifecycle management of buildings, thereby improving efficiency, reducing costs, and enhancing sustainability and functionality.

AI in Architecture is currently in a rapid adoption phase, particularly in design automation and early-stage architectural planning. In design workflows, AI is increasingly used for generative design, parametric optimization, and building performance simulation, significantly improving design efficiency and expanding architectural complexity. In construction and facility management, AI combined with Building Information Modeling (BIM) is enabling predictive scheduling, construction optimization, and intelligent building operations.

From an industry perspective, AI is shifting architecture from an experience-driven discipline toward a data-driven and algorithm-assisted decision-making process. However, the sector still faces challenges such as fragmented data standards, uneven digitalization across the construction industry, and unclear accountability in AI-assisted design decisions. Overall, the long-term value of AI in architecture is expected to

concentrate on design productivity improvement, lifecycle cost optimization, and construction system coordination.

United States market for AI in Architecture is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
