AI MRI Acquisition Software is a software system that integrates artificial intelligence technology with the principles of magnetic resonance imaging (MRI) and uses machine learning, deep learning and other algorithms to intelligently optimize the MRI signal acquisition process. It dynamically adjusts acquisition parameters such as radio frequency pulses and gradient fields through intelligent algorithms to adapt to the needs of different patients or scanning parts, while ensuring image quality. It achieves faster scanning speeds, higher signal-to-noise ratios, and better contrast. At the same time, with the help of artificial intelligence's image reconstruction capabilities, it can intelligently process the collected raw data, effectively suppress interference factors such as noise and artifacts, further improve image clarity and diagnostic value, and provide more accurate and efficient MRI imaging support for clinical practice.
