Abstracts

The global AI and Technology Consulting market size is predicted to grow from US$ 1957 million in 2025 to US$ 8489 million in 2032; it is expected to grow at a CAGR of 20.7% from 2026 to 2032.

AI and Technology Consulting refers to professional consulting services that help businesses, governments, and organizations develop, adopt, and optimize artificial intelligence technologies, digital solutions, and information technology strategies. These services combine technologies such as artificial intelligence (AI), machine learning, cloud computing, big data analytics, Internet of Things (IoT), automation, cybersecurity, and software engineering to assist clients in developing technology strategies, evaluating technology solutions, optimizing business processes, designing digital transformation initiatives, and implementing advanced technologies. AI and Technology Consulting typically includes AI strategy consulting, AI implementation consulting, data and analytics consulting, cloud transformation consulting, digital transformation consulting, technology architecture consulting, and AI governance and risk management services. These consulting services are widely applied across industries such as financial services, manufacturing, healthcare, retail, energy, government, and telecommunications. Driven by the rapid development of generative AI, large language models (LLMs), and intelligent automation, AI and Technology Consulting has become a critical service area for organizations seeking to improve operational efficiency, develop innovative business models, and strengthen technological competitiveness.

In the context of rapid global digital transformation and the acceleration of artificial intelligence adoption, AI and Technology Consulting has evolved from a traditional extension of IT consulting into a core driver of enterprise reinvention. With the maturation of generative AI, cloud computing, big data, and automation technologies,

organizations are shifting their focus from simply adopting technology to fundamentally redesigning business processes and scaling AI across the enterprise. As a result, consulting services that combine strategic insight with deep technical execution have become increasingly critical.

From a market structure perspective, the industry is undergoing a dual transformation. On one side, traditional management consulting firms are rapidly building AI capabilities and embedding artificial intelligence into strategy and digital transformation engagements. On the other side, cloud providers, AI-native companies, and enterprise software vendors are expanding into the consulting space, offering more technical, productized, and platform-driven solutions. This convergence is blurring the boundaries between consulting, engineering, and software delivery, reshaping the market into an integrated ecosystem.

From the demand side, enterprise priorities have shifted significantly. Early-stage adoption focused mainly on proof-of-concept (PoC) and pilot projects, whereas current demand emphasizes large-scale deployment, cost efficiency, and measurable return on investment (ROI). Industries such as financial services, manufacturing, retail, and healthcare are leading adopters, leveraging AI consulting to automate workflows, enhance decision-making, and improve operational efficiency.

Overall, AI and Technology Consulting is transitioning from a supporting technical service into a core capability-building function for enterprises. The long-term trajectory of the market points toward deeper integration of consulting expertise, technical implementation, and platform-based delivery models, with an increasing emphasis on continuous optimization and enterprise-wide AI enablement.

Report Scope

LPI (LP Information)' newest research report, the “AI and Technology Consulting Industry Forecast” looks at past sales and reviews total world AI and Technology Consulting sales in 2025, providing a comprehensive analysis by region and market sector of projected AI and Technology Consulting sales for 2026 through 2032. With AI and Technology Consulting sales broken down by region, market sector and sub-sector, this report provides a detailed analysis in US$ millions of the world AI and Technology Consulting industry.

This Insight Report provides a comprehensive analysis of the global AI and Technology Consulting landscape and highlights key trends related to product segmentation,
