The global AI PC market size is predicted to grow from US\$ 142 million in 2025 to US\$ 402 million in 2032; it is expected to grow at a CAGR of 16.1% from 2026 to 2032.

In 2025, global AI pc production reached approximately 121 k units, the average price is 1200 usd/unit. An AI pc is a personal computer that integrates specialized AI hardware to enhance your experience, protect privacy and inspire creativity by processing AI tasks locally.

Market Concentration and Key Players:

Internationally, the market concentration degree of artificial intelligence computer is relatively high, mainly concentrated in Europe and America and other developed countries. For example, Microsoft and other large manufacturers; from the domestic point of view, artificial intelligence computers still have a lot of room for development.

Manufacturing Processes and Market Trends:

At the heart of the artificial intelligence computer's manufacturing process is the integration of heterogeneous computing architectures, which efficiently cooperate with the central processing unit, graphics processor and neural network processing unit specially designed for neural networks. This involves complex hardware design, such as the use of advanced packaging technologies such as Foveros 3D to enhance integration, and the widespread use of high-bandwidth memory such as DDR5 or even HBM to meet the computing power needs of large models running locally. Cooling systems have also been upgraded to vapor chambers or even liquid cooling solutions to cope with high power consumption. At the production end, Lenovo and other manufacturers adopt flexible manufacturing and digital twin technology to realize rapid model change and process optimization of production line.

The market trend shows that AI PC has entered a period of rapid penetration, and the penetration rate is expected to reach 81% in 2027. The growth is driven by the replacement cycle, the commercial needs of Windows 10 out of service, and the advantages of end-side AI reasoning in terms of low latency and high privacy. The focus of competition is shifting from hardware performance to ecosystem capabilities, with vendors accelerating end-side large model deployments and building open application ecosystems. Upstream and downstream of the industrial chain, from chip manufacturers to ODM/OEM manufacturers, are actively laying out to promote the improvement of hardware value and the expansion of market scale. The future development trend will focus on application explosion and agent capability iteration, and the key is to improve user experience through technological breakthrough and ecological collaboration.
