The global AI PC Software market size is predicted to grow from US\$ 9600 million in 2025 to US\$ 32721 million in 2032; it is expected to grow at a CAGR of 18.3% from 2026 to 2032.

PC also called personal computer. Regarding AI PCs, different manufacturers focus on different things: on the equipment side, chip manufacturers focus on improving AI accelerator capabilities, and PC manufacturers focus on configuration and functions combined with large models; on the product side, game notebooks are more in line with the first value realization of AI PCs.

The global AI PC software market is experiencing rapid growth, driven by the widespread adoption of AI PCs and the deepening demand for intelligent office and personal assistant functions. It is a high-growth segment with significant commercial potential, supported by both consumer and enterprise demand.

Key drivers include the continuous improvement of AI chip performance, which enables smooth local operation of large models, and the increasing demand for customized AI office solutions in industries such as education and finance. Major hardware manufacturers and software developers are strengthening collaboration to optimize the integration of software and hardware.

However, the market also faces challenges, including immature technology in some scenarios, low user willingness to pay for additional AI functions, and ecological fragmentation due to inconsistent AI architectures among different vendors.

Looking ahead, with the popularization of high-performance AI PC hardware and the

standardization of AI capability APIs, the AI PC software market will enter a stage of large-scale popularization, with enterprise-level solutions becoming the main growth engine.
