AI-powered chessboard deeply integrates artificial intelligence algorithms with physical or digital chessboards. Their core function is to address the problems of traditional chess games, such as lack of professional guidance, rigid human-computer interaction, and low training efficiency, through real-time situation analysis, move suggestions, and adaptive difficulty adjustment. This provides players with dynamic practice and tactical analysis services. The upstream supply chain mainly includes AI algorithm and cloud computing service providers, high-precision sensor and chip manufacturers, and chess database suppliers. Downstream, it serves individual consumers, professional chess players, and the chess teaching and training market through hardware sales, online chess platforms, and educational institutions. In 2025, the production of AI-powered chessboard is estimated at 45,000 sets, with an average price of approximately \$250 per set, a gross profit margin of approximately 40%, and a single production line capacity of 700 sets per year.
