The global AI-Powered Digital O&M Solution market size is predicted to grow from US$ 27792 million in 2025 to US$ 44983 million in 2032; it is expected to grow at a CAGR of 7.2% from 2026 to 2032.

An AI-Powered Digital O&M Solution is an integrated software and service platform that combines artificial intelligence, machine learning, Industrial Internet of Things connectivity, digital twins, cloud or edge computing, and operational data analytics to manage the operation and maintenance of equipment, facilities, production systems, and infrastructure. The solution collects real-time and historical asset data to monitor operating conditions, detect anomalies, diagnose faults, predict remaining useful life, optimize equipment performance, automate inspections and work orders, and recommend maintenance actions, enabling organizations to transition from reactive or time-based maintenance toward condition-based, predictive, and prescriptive maintenance.

The AI-powered digital O&M industry is moving toward integrated cloud-edge architectures, digital-twin-based asset simulation, generative-AI maintenance assistants, computer-vision inspection, autonomous robots and drones, and unified platforms that connect asset monitoring, fault diagnosis, work-order management, energy optimization, and field service operations. Major opportunities arise from the need to reduce unplanned downtime, address shortages of experienced maintenance technicians, extend asset life, improve energy efficiency, and modernize aging industrial and public infrastructure, particularly in manufacturing, energy, transportation, utilities, data centers, and smart buildings. However, adoption continues to face challenges including high initial implementation costs, insufficient or fragmented equipment data, integration with legacy OT and IT systems, cybersecurity risks, limited availability of
