AI-powered vehicle damage assessment solutions are intelligent claims assistance systems based on computer vision, deep learning, and big data analytics. They automatically identify damaged areas, determine damage types, and estimate repair plans and costs using images of accident vehicles captured by mobile phones or cameras, significantly improving the efficiency and consistency of insurance damage assessments. The upstream of the industry chain includes AI algorithm frameworks, cloud computing service providers, image annotation data companies, and in-vehicle/mobile terminal hardware manufacturers. The midstream consists of AI companies focused on insurance technology, requiring large-scale damage image databases, 3D vehicle modeling capabilities, API integration experience with insurance company core systems, and compliance qualifications. The downstream primarily targets property insurance companies, insurance loss adjusters, 4S dealerships, and third-party claims service platforms. Due to its focus on software and SaaS services, the industry has low marginal costs and high replicability, with overall gross profit margins generally ranging from 55% to 75%.
