Analog chips mainly include power management chips and signal chain chips. Power management chips are the power supply heart of electronic devices, responsible for the power conversion, distribution, detection and other control functions required by electronic devices; they are key components in electronic devices, and their performance has a direct impact on the performance and reliability of electronic products, and are widely used in various electronic products and equipment. It is one of the largest market segments of analog chips. Power management chips can be divided into AC/DC (AC to DC), DC/DC (DC to DC), driver IC, protection chip, LDO, load switch, PMIC, etc.

Signal chain chips are the bridge between the real world and the digital world, mainly processing, receiving and sending analog signals, and converting information such as light, magnetic field, temperature, and sound into digital signals. Signal chain chips can be further divided into amplifiers, comparators, analog-to-digital/digital-to-analog converters and various interface products.
