The global AI Server HDI Boards market size is predicted to grow from US$ 543 million in 2025 to US$ 873 million in 2032; it is expected to grow at a CAGR of 7.2% from 2026 to 2032.

AI Server HDI Boards refer to High-Density Interconnect (HDI) printed circuit boards specifically designed for AI servers, which require extremely high performance, high-speed signal integrity, and reliability to support AI workloads. In 2024, global AI Server HDI Boards sales reached approximately 701.4 k units, with an average global market price of around $700 per unit. The production capacity of AI Server HDI Boards in 2024 is approximately 717.3 k units. The AI Server HDI Boards involve a supply chain comprising upstream material supply, midstream PCB design and manufacturing, and downstream server integration. Upstream suppliers provide key materials such as high-performance copper-clad laminates, resins, copper foils, and solder masks, which determine the electrical performance, signal integrity, and thermal management of the HDI boards. In the midstream, PCB design and fabrication companies handle high-precision processes such as circuit layout, micro-blind/buried via drilling, laser drilling, copper plating, and multilayer lamination to produce HDI boards that support the high computing power and dense interconnections required by AI servers. Downstream, server manufacturers integrate the HDI boards with GPUs, CPUs, memory, and cooling systems to build AI computing platforms for data centers or enterprise-level AI servers, realizing the value conversion of upstream materials and manufacturing capabilities.

United States market for AI Server HDI Boards is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
