The global AI Short Drama Platform market size is predicted to grow from US\$ 1225 million in 2025 to US\$ 2955 million in 2032; it is expected to grow at a CAGR of 13.5% from 2026 to 2032.

An AI short drama platform refers to a digital platform based on artificial intelligence technology that provides distribution, playback, and interactive viewing of short drama content. It not only supports online playback of short animated episodes (typically 1-5 minutes), but also combines AI recommendation algorithms to provide personalized content recommendations, comments, favorites, sharing, and interactive storyline branches. Some platforms integrate with AI creation tools or generative content platforms to achieve a closed loop from content creation and automatic generation to publication and distribution. Its core objective is to provide viewers with a fragmented, high-frequency, and personalized short drama viewing experience, while providing creators and businesses with traffic analysis, user insights, and monetization support.

The market prospects for AI short drama platforms are broad. On the one hand, the global demand for high-frequency, fragmented, and highly interactive content from short video users and young people continues to grow, making playback platforms an important entry point for content consumption. On the other hand, the development of generative AI technology, cloud rendering, multimodal animation, and personalized recommendation technology enables creators to quickly generate high-quality short drama content, increasing content supply. In the future, these platforms will not only serve the entertainment market, but will also play an important role in brand marketing, education and training, virtual idols and social interaction, realizing an ecological closed loop of content creation, distribution and commercialization, and promoting the intelligent and automated development of the global short video and digital animation

industry.
