The global AI Simultaneous Interpreting market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

AI Simultaneous Interpreting refers to the use of artificial intelligence (AI) technology to provide real-time interpretation of spoken language. It involves the use of machine learning algorithms and natural language processing techniques to automatically translate and interpret speech from one language to another, allowing for seamless communication between individuals who speak different languages.

AI Simultaneous Interpreting systems typically involve the use of speech recognition to convert spoken language into text, followed by machine translation to translate the text into the desired language, and finally, text-to-speech synthesis to convert the translated text back into spoken language. This process happens in real-time, allowing for immediate interpretation of conversations or speeches.

The use of AI in simultaneous interpreting can greatly enhance the efficiency and accuracy of interpretation services, as it eliminates the need for human interpreters and reduces the time lag between the original speech and its interpretation. It can be particularly useful in situations such as international conferences, business meetings, or other multilingual events where real-time interpretation is required.

China and the United States are two leaders in AI industry. On the AI 100 list (2022) released by CB Insights, the number of companies in the United States ranks first, with more than 70 companies, followed by the United Kingdom, with 8 companies on the list. China and Canada both holds 5 companies on the list. According to data from the China

However, the Global Artificial Intelligence Innovation Index Report 2021 released by the China Institute of Scientific and Technological Information shows that the overall strength of the United States is still far ahead. The number of artificial intelligence companies in the United States is about 4,670, while China has only 880. China's data center is less than 1/29 of that of the United States.
