Abstracts

The global AI Training Datasets market size is predicted to grow from US\$ 1756 million in 2025 to US\$ 11859 million in 2032; it is expected to grow at a CAGR of 31.5% from 2026 to 2032.

The global AI Training Dataset gross margin is projected to be around 49% in 2025. AI Training Datasets refer to collections of data assets organized as 'machine-readable, reusable, and licensed' for training, fine-tuning, aligning, and evaluating artificial intelligence models. They typically include raw data (images, videos, audio, text, sensor/point clouds, etc.), structured labels/metadata (categories, bounding boxes/segments, timestamps, trajectories, command-response pairs, preference comparisons, etc.), and data descriptions (data source, copyright/licensing, collection conditions, quality standards, and version information). From a commercial delivery perspective, AI Training Datasets can be sold as 'off-the-shelf datasets' under license, or delivered as 'dataset creation' on a project basis (including data collection, annotation, and quality control), and continuously updated and versioned on platforms or data marketplaces. Industry research often categorizes them into two main types: 'dataset creation' and 'dataset sales/marketplaces.'

AI datasets are evolving from 'project-deliverable data packages' to 'sustainably iterative data assets.' As generative AI and multimodal models enter their productization cycle, customer procurement focus is shifting from data quantity to data quality, traceability, and reproducible evaluation. Dataset vendors need to deliver more robust authorization chains, data lineage, version management, and quality audits to support long-term iteration and compliance requirements. Simultaneously, synthetic data and data augmentation are increasingly used to address long-tail and scarce scenarios, driving dataset supply from purely manual labor-intensive to a hybrid paradigm of

'tools/platforms + human feedback.' This has resulted in a structural differentiation in industry gross margins: higher margins for off-the-shelf datasets, lower margins for custom-created datasets, and more stable margins for platform-based datasets.
