The global AI Vision Processor market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

An AI Vision Processor, often referred to as a Vision Processing Unit (VPU), is a specialized hardware component designed to accelerate and optimize tasks related to computer vision and artificial intelligence (AI) at the edge, meaning directly on the device where data is captured, rather than relying on cloud-based processing. These processors are commonly used in applications such as autonomous vehicles, drones, surveillance cameras, augmented reality (AR) and virtual reality (VR) devices, robotics, and various IoT (Internet of Things) devices.

AI Vision Processors were being increasingly adopted in edge devices such as surveillance cameras, drones, smartphones, and autonomous vehicles. This trend was driven by the need for real-time processing and decision-making at the edge, reducing the reliance on cloud-based processing.
