## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

The term 'aids to navigation' includes buoys, day beacons, lights, lightships, radio beacons, fog signals, marks and other devices used to provide 'street' signs on the water. Unlike the roads and highways that we drive on, the waterways we go boating on do not have road signs that tell us our location, the route or distance to a destination, or of hazards along the way. Instead, the waterways have AIDS TO NAVIGATION (or ATONs), which are all of those man-made objects used by mariners to determine position or a safe course. These aids also assist mariners in making a safe landfall, mark isolated dangers, enable pilots to follow channels, and provide a continuous chain of charted marks for precise piloting in coastal waters.
