## Abstracts

The global AIM Impact Modifier market size is predicted to grow from US\$ 1097 million in 2025 to US\$ 1579 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

In 2025, global production of AIM impact modifiers reached 934,800 tons, with an average selling price of US\$1,200 per ton. The global annual production capacity of AIM impact modifiers is approximately 1.2 million tons, with a gross profit margin of approximately 21.5%. AIM impact modifiers are additives used to improve the impact resistance of plastics, especially engineering plastics. AIM impact modifiers are important plastic modifiers; through their unique core-shell structure and mechanism of action, they can significantly improve the impact resistance and toughness of plastics, expanding their application range. The upstream of the AIM impact modifier industry chain includes styrene-based compounds, initiators, and base resins/carriers; the midstream consists of AIM impact modifier manufacturers; and the downstream mainly comprises the construction, automotive, and electronics industries.

The current market situation for AIM impact modifiers generally presents a pattern of 'steady demand, coexistence of technological barriers and differentiated competition': Driven by automotive lightweighting, upgrades in materials used for home appliance and 3C casings, and increased comprehensive requirements for toughness/impact resistance and processability, AIM (commonly used to improve PC/ABS, ABS modification systems, or compatible modifications) continues to penetrate the modified plastics field. Meanwhile, downstream industries are placing higher demands on environmental compliance (such as low volatility, low odor, and traceability) and consistency, prompting companies to upgrade from simple formulation sales to functionalization, process matching, and application technology services. In terms of market competition, domestic manufacturers are gradually expanding their market share in some grades and cost advantages, but there is still room for improvement in the

stability, long-term aging performance, and application data systems of high-end grades. The overall trend is towards 'customized solutions + stable batch quality + low-cost implementation.'
