The global AINUOVIRINE market size is predicted to grow from US\$ 41.18 million in 2025 to US\$ 117 million in 2032; it is expected to grow at a CAGR of 10.5% from 2026 to 2032.

In 2025, global ENOVELIN production reached approximately 460,000 units. ENOVELIN is a novel small-molecule antiviral agent primarily used for the treatment of viral infectious diseases, with potential applications particularly in respiratory viruses and other RNA virus infections. Its mechanism of action generally involves inhibiting key enzymes required for viral replication or interfering with viral nucleic acid synthesis, thereby blocking viral replication and spread within host cells.

Compared with traditional antiviral drugs, ENOVELIN demonstrates certain advantages in terms of sustained efficacy, safety, and resistance control, while also offering convenient oral administration and high bioavailability. In clinical studies or applications, the drug has shown favorable antiviral activity and tolerability, indicating its potential to establish a role in antiviral therapy. Overall, as a novel antiviral candidate, ENOVELIN shows promising prospects in addressing viral infections.

AINUOVIRINE (ENOVELIN), as a next-generation non-nucleoside reverse transcriptase inhibitor (NNRTI) independently developed in China, is primarily positioned in the HIV antiviral treatment market. With the global population living with HIV remaining at a high level, the demand for antiretroviral therapy (ART) continues to be stable and steadily growing, particularly in developing countries and emerging markets, where there is a strong need for new drugs with high efficacy, safety, and low resistance. AINUOVIRINE demonstrates strong antiviral activity, low cross-resistance, and fewer drug-drug interactions, providing a differentiated competitive advantage within existing treatment regimens.

From a competitive perspective, the current HIV treatment market is dominated by integrase strand transfer inhibitors (INSTIs) and traditional NNRTIs (such as efavirenz). However, some of these drugs are associated with metabolic side effects or resistance issues, leading to renewed interest in next-generation NNRTIs. As a domestically developed innovative drug, ainuovirine was approved for marketing in 2021 and has been included in treatment guidelines and reimbursement systems, facilitating its rapid uptake in the Chinese market. In addition, its once-daily oral administration and favorable tolerability provide advantages in long-term chronic disease management.
