The global Air Atomizing Spray Nozzle market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

An air atomizing spray nozzle is a device used to create a fine mist or spray by combining a liquid with compressed air. It consists of a nozzle body, liquid inlet, air inlet, and an internal mixing chamber. The liquid is introduced into the nozzle body through the liquid inlet, while compressed air is introduced through the air inlet. Inside the mixing chamber, the liquid and air are mixed together, creating a finely atomized spray. The size and shape of the spray pattern can be adjusted by controlling the liquid and air flow rates and the nozzle design. Air atomizing spray nozzles are commonly used in various applications such as coating, humidification, cooling, and dust control.
