Air bearing linear stages are high-precision positioning systems that utilize a thin layer of pressurized air to support and guide linear motion without physical contact between moving parts. This frictionless design minimizes mechanical wear and eliminates backlash and vibration, enabling ultra-smooth and accurate movement ideal for applications such as semiconductor inspection, nanometrology, and laser processing. Typically powered by linear motors and integrated with high-resolution encoders or interferometers, air bearing linear stages deliver exceptional stability, repeatability, and sub-micron or nanometer-level positioning accuracy. Their non-contact nature also ensures long-term reliability and low maintenance in demanding precision environments.
