The global Air Carbon Arc Gouging Rod market size is predicted to grow from US\$ 572 million in 2025 to US\$ 832 million in 2031; it is expected to grow at a CAGR of 6.4% from 2025 to 2031.

A copper-coated carbon electrode or graphite electrode is used to generate an arc. The copper coating minimizes electrode erosion. Here, the electrode diameter plays a crucial role in reducing waste. Select the right diameter based on the width and depth of the gouge. Using the correct electrode diameter helps to precisely control cutting or gouging and reduce material waste.

Metal cutting equipment refers to the equipment that makes the metal material be cut into the desired shape by mechanical operation, which is an indispensable basic processing equipment in modern industrial production. With the acceleration of infrastructure construction and the progress of social development, there is an increasing demand for metal cutting equipment. According to our research, the global metal cutting equipment market reached USD 62.4 billion in 2022.
