The global Air Caster Rigging System market size is predicted to grow from US\$ 306 million in 2025 to US\$ 410 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

The air caster rigging system is an innovative system designed specifically for transporting large equipment. It uses air as a suspension medium and generates a uniform airflow at the bottom of the equipment to form a thin air cushion, allowing the equipment to easily float above the ground. This system has demonstrated extremely high efficiency and safety during the handling process with its superb load-bearing capacity, excellent handling performance and extremely low friction coefficient. Its characteristics are that it can adapt to different ground conditions and is easy to operate. Even in complex environments with limited space or uneven ground, it can stably and reliably transport large equipment weighing several tons. The advantage of the air caster rigging system is that it not only reduces the damage to the ground caused by equipment handling, reduces energy consumption and manpower requirements during the handling process, but also greatly improves the speed and efficiency of the handling operation, providing an efficient and environmentally friendly solution for the installation and transfer of large equipment.
