The global Air Cavitation Slimming Instrument market size is predicted to grow from US\$ 171 million in 2025 to US\$ 347 million in 2032; it is expected to grow at a CAGR of 10.7% from 2026 to 2032.

In 2025, global non-invasive contactless fat reduction devices production reached approximately 41,400 units. The non-invasive fat reduction device is a type of beauty equipment that uses energy such as laser, radiofrequency, ultrasound, or infrared to target subcutaneous fat tissue, achieving fat breakdown and localized body contouring. This device does not require surgery or injections and can penetrate the skin to stimulate fat cell metabolism, promoting the release of fatty acids, thereby achieving slimming, firming, and body shaping effects. It is widely used in beauty salons, skin care centers, and home care settings.

In recent years, the market for non-invasive fat reduction devices has maintained steady growth with the widespread adoption of non-invasive beauty concepts and the increasing consumer demand for localized body shaping. These devices are widely used in beauty salons, skin care centers, and home care, primarily for local fat breakdown, slimming, and body contouring. With technological upgrades, the market is moving toward multi-energy modes, intelligent adjustment, portability, and integrated care functions, while consumer attention to safety, ease of use, and treatment effectiveness is driving a trend toward high-quality product concentration. In the future, the market for non-invasive fat reduction devices is expected to maintain stable growth, with products combining intelligence and multifunctional integration being particularly popular.
