According to this study, the global Air Charging Technology market size will reach US\$ million by 2029.

Air Charging technology refers to a wireless power transfer method that allows devices to be charged through the air, typically using radio frequency (RF) signals or other forms of electromagnetic waves. This technology enables devices to be charged without the need for physical connections or direct contact with a charging pad.

Air Charging technology enables devices to receive power wirelessly, without requiring physical contact with a charging pad or cable. It utilizes electromagnetic waves to transfer energy from a transmitter to a receiver device.

The charging system consists of a transmitter, which emits electromagnetic waves, and a receiver within the device to be charged. The receiver captures the electromagnetic energy and converts it into electrical power to charge the device.
