The air compressor control system is a key part used to control the operation of the air compressor. Its purpose is to ensure that the air compressor works stably, efficiently and safely. The core control component processes and analyzes data through signals from various sensors, and issues control instructions according to preset programs and logic. According to the instructions of the control system, it controls the start, stop, speed adjustment and other operations of the air compressor motor. In some more complex air compressor control systems, PLC is used for control. PLC has the advantages of high reliability, flexible programming, and strong anti-interference ability, and can achieve precise control and complex logic control of the air compressor.
