The global Air Conditioner Misting Pre-Cooling market size is predicted to grow from US\$ 154 million in 2025 to US\$ 257 million in 2032; it is expected to grow at a CAGR of 7.7% from 2026 to 2032.

Air conditioning pre-cooling spray system is a technology that reduces air temperature by introducing high-pressure spray at the air inlet of air conditioning and refrigeration equipment. The system uses the "flash" effect to lower ambient air temperature by generating tiny water droplets at 1000 PSI pressure, reducing compressor load and operating energy consumption, thereby improving condenser efficiency and extending equipment life. It can significantly reduce energy consumption, reduce the load on air conditioning systems at high temperatures, improve operating efficiency, reduce maintenance costs, and prevent corrosion and sediment accumulation through water treatment devices.
