Air conditioning disinfectants are chemical agents used to kill or inhibit the growth of microorganisms such as bacteria, mold, fungi, and algae within air conditioning systems (such as evaporators, air ducts, and filters). They effectively prevent problems such as odor, reduced air volume, decreased heat exchange efficiency, and "air conditioning sickness" caused by microbial growth. These products, typically available in spray, liquid, or solid slow-release forms, are primarily composed of quaternary ammonium salts, chlorine dioxide, peroxides, or natural plant extracts. They offer broad-spectrum antimicrobial properties, rapid onset, and low corrosion to metal and plastic components. They are widely used in the cleaning and maintenance of residential, commercial, and central air conditioning systems, helping to improve indoor air quality, safeguard human health, and ensure proper operation of the equipment.In 2024, the global production of air-conditioning fungicides will reach 15.72 million units, with an average selling price of US$4,326 per thousand units.

United States market for Air Conditioning Disinfectant is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
