According to this study, the global Air Conditioning Maintenance market size will reach US$ million by 2031.

Air conditioning maintenance refers to the regular upkeep and servicing of an air conditioning system to ensure its optimal performance, efficiency, and longevity. Proper maintenance helps prevent breakdowns, improves energy efficiency, promotes good indoor air quality, and extends the lifespan of the equipment.

The air filters in the AC system should be cleaned or replaced regularly to remove dust, dirt, and other contaminants. Clogged filters reduce airflow, strain the system, and hinder cooling efficiency. Depending on the type of filter, it may need cleaning every few weeks or replacement every few months.
