An air-cooled battery compartment is a device specially designed for storing and managing battery packs. It uses air cooling technology to maintain the battery within the optimal operating temperature range. The compartment uses natural ventilation or forced air cooling to effectively dissipate the heat generated during the battery charging and discharging process, ensuring battery performance, extending service life and improving safety. Air-cooled battery compartments usually have protective functions to prevent external factors such as dust and moisture from affecting the battery. They are suitable for electric vehicles, energy storage systems and other scenarios that require efficient thermal management and stable power output. By optimizing the working environment of the battery, the air-cooled battery compartment helps to improve the reliability and efficiency of the entire power system.

United States market for Air-cooled Battery Compartment is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
